PROMINENT PROJECTS:

Project#1 : Working On CRM Software

Role : Developer

Environment : Java, JSP, Spring Boot, Hibernate, JPA, JSP, MySQL

Description : CRM (Customer Relation Management) Software System where it consists of two panels Admin and User. Admin will keep track of all the activities by the user and maintain access to the user activities. User can use all the resources like (Task, leads, emails, sales, purchase and reports).

Project # 2 : Water Supply App**Role : Developer****Environment: Android, Firebase, Angular 4**

Description : Water supply can is an android application where user can book the can of water and even bottles of different litres. Before developing this we have seen so many app which is already developed by someone but we have found so many bugs in that and we overcome with this in our application. We created this app by seeing the demands and globalisation of digital marketing, even the necessity of people. For present we scenario we have created one application for customer and dashboard for admin where they can confirm the order and view the status etc. In future we will try to implement two way maps in seller application.

- Worked as a Developer.
- Developed User Authentication using Firebase, Account Setting, Payment Integration, and Cart
- Designed and developed various XML Layouts in the application.
- Customized page layouts depending upon client requirement.

Project # 3 : Pentateuch App**Role : Developer****Environment: Android**

Description : Pentateuch app is an android application which we created for our own company where we are working now and this was first app ever we have created in team. This app we have mentioned all the ideas of company, technology on what they are working.

Responsibilities:

- Worked as Android Developer in the organization.
- Developed User Authentication using Firebase, Using fragment merged all the activity of team member
- Designed and developed various XML Layouts in the application.
- Customized page layouts depending upon client requirement.

Project # 4 : Shopping Website (myekha.com)**Role : Developer****Environment : Bootstrap 4, PHP (7.2), Java Script, My SQL**

Description : My Ekha is a shopping website for girls and this website we have included unique features which you won't see in any other ecommerce website. In our website once the user will click on Shop Now of particular cloth then a popup box will asking about "would you like to see 360 degree views of that product " once the user click on try it on button ,it will redirect to 360 degree view page ,this page we have kept model and accessories menu left . Once the user click on selected cloth that cloth will fit over the model and then user will be able to see 360 degree views of that cloth ,it just we can say "Look and Feel" for user.

Responsibilities:

- Worked as a Developer.
- Worked on Complete Admin panel, Check out, Managing Address of Account.
- Currently working on 360 degree View.
- Worked on creating the website responsive.
